**Findings/Faits saillants :**

1. The licensee has failed to ensure that lighting requirements set out in the lighting table are maintained.

On May 07, 2015 illumination levels in the long term care home were checked by Inspector #102. Two hand held light meters were used: an Amprobe model and a GE model. The meters were held and/or placed at varying heights above the floor surface. All available electric light fixtures were turned on and warmed up.

During the inspection, many light fixtures throughout the home were observed to be either missing bulbs or contained bulbs that were not functioning. Several track lighting fixtures in communal areas were observed to be missing lights on the provided tracks. The quantity of missing and/or non functional lights and bulbs was discussed with the Administrator, who was in the home at the time of the inspection.

Levels of illumination in all open concept program/lounge areas, the chapel, the residents' kitchenette/tuck shop, Resident Home Area (RHA) dining rooms, in tub and shower rooms and in various work areas within the nursing/staff work stations were less than 25% to 75% of the required lighting level of 215.28 lux unless underneath or in close proximity to operational light fixtures that were equipped with bulbs.

The levels of illumination provided in corridors throughout the RHAs and in the corridor in the vicinity of the main entrance through to the RHAs, were identified to range from less than 50 % to 75% of the required illumination level between the majority of light fixtures and along handrails. Light levels of more than 215.28 lux are provided directly underneath and in close proximity to most of the ceiling light fixtures. Shadowing was evident throughout corridors. Corridor lighting consists of a combination of recessed pot light fixtures and florescent strip lighting at a number of bedroom doorways. A minimum level of 215.28 lux of continuous, consistent lighting is not provided throughout corridors.

Illumination levels in bedrooms and ensuite washrooms were identified to be compliant.

During the inspection, a number of staff identified concerns with insufficient lighting levels in various resident areas of the home. During the Resident Quality Inspection (RQI) which commenced on June 17, 2014, inspection # 2014 360111 0017, inspection staff identified concerns with low lighting levels in the home.

Low levels of lighting are a potential risk to the health, comfort, safety and well being of residents. Insufficient lighting levels may negatively impact the ability of staff to clean effectively; to deliver safe and effective care to residents including: the distribution or application of prescribed drugs and treatments; to conduct assessments; to provide treatments; to document. Low levels of illumination and shadows may negatively impact residents' perception of the surrounding environment affecting mobility, nutritional intake and overall quality of life. [s. 18.]
