s. 229. (10) The licensee shall ensure that the following immunization and screening measures are in place:

4. Staff is screened for tuberculosis and other infectious diseases in accordance with evidence-based practices and, if there are none, in accordance with prevailing practices. O. Reg. 79/10, s. 229 (10).

1. The licensee did not ensure that staff were screened for tuberculosis in accordance with prevailing practices (Public Health Guidelines and the Canadian Tuberculosis Standards).

Prevailing practices identified as "The Canadian Tuberculosis Standards, 7th edition" identify that all staff working in long term care homes be screened for tuberculosis prior to employment. The standards further describe that workers and volunteers under the age of 65 have a skin test and those over 65 years of age only require a chest x-ray and assessment. Best practices identified by the Toronto Public Health Department also require that workers and volunteers undergo a skin test before employment for those under 65 years of age.

On October 24, 2013, Order #006 was issued for missing information on the status of tuberculosis screening results for two employees during an inspection conducted between July 16 and August 19, 2013. For this inspection, confirmation was made that both employees had been screened for tuberculosis. However, in order to determine if the conditions laid out in the previous Order #006 were met, eight random employee records were requested for individuals who were hired prior to September 2013 and all employee records for those who were hired after September 2013.

For the newly hired employees, documented evidence was available which identified the dates that the employees were screened for tuberculosis, however not all were screened using the prevailing practice of a skin test. The licensee accepted chest x-ray results for approximately 11 of the employees who were under 65 years without any other documented evidence of their tuberculosis skin test status.

For employees hired prior to September 2013, the licensee did not have any documented evidence of any tuberculosis screening for four of the eight employees randomly selected. [s. 229(10)4.]
