**Findings/Faits saillants :**

1. With respect to s. 3.(1)4., an identified resident was not cared for in a manner consistent with their needs when infection control measures were instituted. The resident was placed into restrictive isolation upon admission to the home from hospital in 2011. The management staff of the home initiated their policy with respect to outbreak control measures for a communicable disease. The precautions included measures to protect their staff and other residents from acquiring the organism which is transmitted via hands from feces to mouth. In doing so, the resident's care abilities and care needs were not taken into consideration. The resident was required to eat from disposable chinaware in their room, could not leave their room to have a shower, socialize or go outside, all measures which are extreme and not necessary for this particular situation. The resident was cognitively well, not bed ridden and was able to comply with general hygiene practices. The home staff have since updated their policies and procedures regarding the maintenance of resident's care needs during an outbreak or when positive for a communicable disease.
