1. The licensee failed to ensure that the home is equipped with a resident- staff communication and response system that, can be accessed and used by residents at all times.

- Resident #1 is totally dependent on staff for transfers and experienced a decline in ability to perform activities of daily living (ADL's). Resident #1 is socially isolated by choice and spends a fair bit of time within the bedroom.

- During the inspection, the inspector observed the call bell to be placed upon the resident's bed while the resident was seated in wheelchair. The resident's right side is paralyzed and was closest to the bed. The resident indicated and demonstrated to the inspector that they were unable to access the call bell and that this occurs frequently.

- An interview was held with the assigned personal support worker (PSW) regarding the accessibility of the resident's call bell. The PSW confirmed the call bell is to be placed under the resident's unaffected arm whenever seated in a wheelchair. The PSW confirmed the resident would not be able to access the call bell if not placed under the resident's unaffected arm. [s. 17. (1) (a)].
