Findings/Faits saillants :

1. The licensee failed to ensure that a plan of care was based on, at minimum, interdisciplinary assessment of the following with respect to an identified resident: Mood and behaviour patterns, including wandering, any identified responsive behaviours, any potential behavioural triggers and variations in resident functioning at different times of the day.

The responsive behaviour plan of care for an identified resident was not based on an interdisciplinary assessment of the resident. Interview with staff and documentation in the clinical health records indicate that the resident showed inappropriate behaviours. There was no evidence that an interdisciplinary assessment related to these behaviours has been conducted. Triggers and variations in functioning at different times of the day have not been identified. The plan of care has not been developed and implemented to manage these responsive behaviours.
